

## Product Change Notification MultiMark terminal Marker

Dear Sir or Madam,

the articles listed below will be supplied in the future in a modified revision. Please pass this product information on to your employees and, if necessary, to your customers. All modifications are for the benefit of improved product performance.

### 1. Initial situation

In February 2016, we launched our new MultiMark terminal strip marker. We are going to improve the visibility and the marking area, which allows the user to print more information on each marker. To ensure the printing quality a special print roller is needed (2438500000). This modification positively affects the material feed which improves the accuracy of printing.

### 2. Technical changes

#### 2.1. Terminal markers

- The rear side of the material will be white(a).
- A black mark, also on the rear side, acts as the reference for the sensor in the printer
- The top side has a continuous white surface(c) without a sensor gap

## 2.2. Terminal print roller

The old print roller fed the material via friction through its rubber surface. The new print roller engages with the terminal marker via a sprocket wheel, ensuring a strong mechanical connection.

## 3. Reason of change

- Improving the printing accuracy.
- Ensures better readability
- Bigger marking areas

## 4. Availability

- 243850000 THM MMP ROLLER TB is available now
- The new terminal markers are available in week 47 /2017
- The printer will include the new roller from start of week 47/2017
- Local availability for customers must be confirmed individually.

## 5. Affected parts

All article number will remain:

2007100000	DEK 5/3.5 MM WS
2007110000	DEK 5/5 MM WS
2007120000	DEK 5/6 MM WS
